PROJECT EXPERIENCE

Football News - Django & Flutter Application

- Developed Football News, a full-stack football news platform consisting of a Django web application and a Flutter mobile application, enabling users to browse, manage, and access football-related news through an intuitive and responsive interface.

KitKeeper - Football Jersey Collection Platform

- Collaborated in developing KitKeeper, a football jersey collection management platform that allows users to organize, track, and showcase their jersey collections through a structured and user-friendly system built using Django.

Lume - Full-Stack Web & Mobile Application

- Built Lume, a cross-platform productivity app with web and mobile versions, featuring task, schedule, and note management to support daily organization, while contributing to frontend and backend development in a Git-based collaborative workflow.

TikTakTuk - Database-Driven Web Application

- Developed TikTakTuk, a full-stack web application as a group project for a Database Systems course, built with SQL and Neon as the database layer, focusing on relational schema design, data management, and Git-based team collaboration.

TransitSecure - Secure Software Engineering Project

- Developed TransitSecure, a secure transportation ticketing web system featuring input validation, CSRF protection, role-based access control, rate-limited authentication, and verified transaction records to strengthen transaction integrity and application security.

Burhanpedia - Native Java Project

- Built Burhanpedia, a native Java e-commerce application simulating marketplace workflows while applying OOP, exception handling, file I/O, generics, lambda expressions, and structured data management.
